ACCESSIBILITY IN GAMES

Background

- Gaming is the biggest entertainment industry by revenue.
- Bigger than the movie and music industry combined!
- Over 2 billion gamers across the world. That is 26% of the world's population [1]

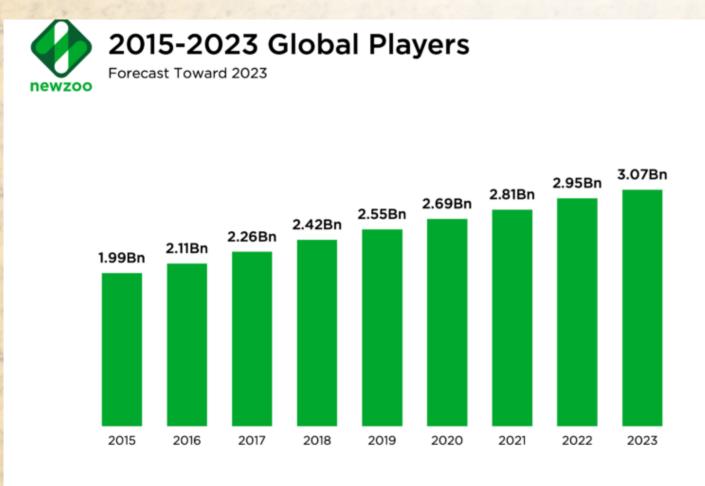

Problem & Motivation

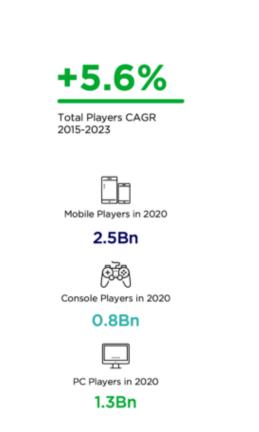

- A billion people experience some form of disability, 15% of global population [2]
- According to PopCap Games Research, this figure rises to 20.5% among gamers.
- Disabled gamers have more video game engagement than casual gamers overall

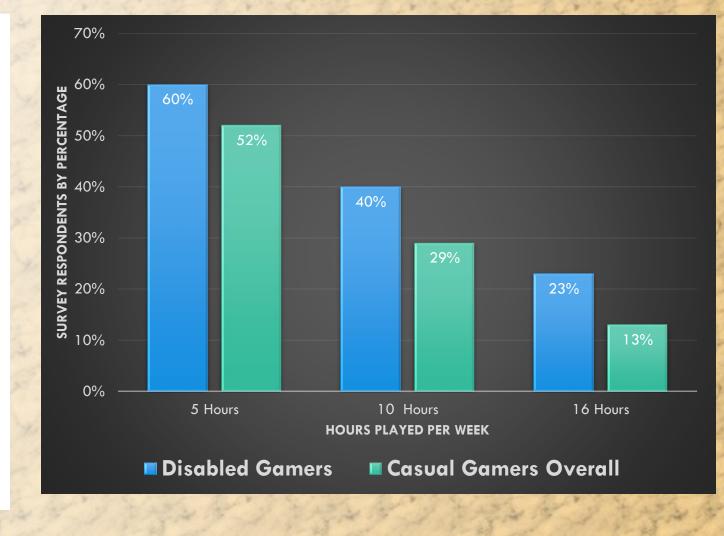

The Proposed Approach

- The main focus for the project is to put more emphasis in accessibility for games
- Integrate video game accessibility features to lower barriers to access faced by people with disabilities ("Color Switch" Game)
- Accessibility barriers considered: Visual, Motor, and Cognitive Impairment

| Gaming: The Most Lucrative **Entertainment Industry By Far** Global revenue of selected entertainment industy sectors in 2019 \$145.7b Mobile: 45% Console: 32% \$42.5b \$20.2b PC: 23% **Box Office** Music Gaming Sources: Newzoo, Comscore, IFPI statista 🗹 (c) (i) (=)

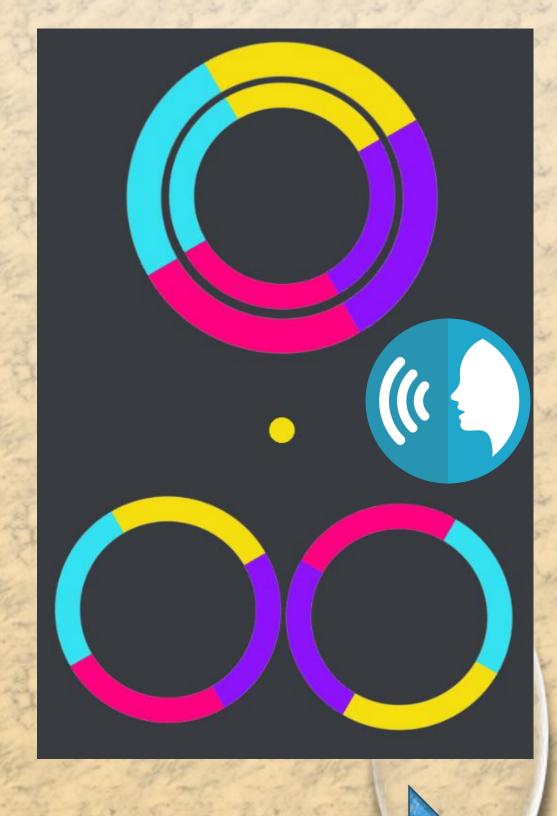

Aim & Objectives

AIM: TO DEVELOP A UNITY GAME WHICH INCORPORATES ACCESSIBILITY FEATURES TO HELP FACILITATE THE EXPERIENCE AND CHALLENGES ENCOUNTERED BY PLAYERS WITH ACCESSIBILITY ISSUES.

OBJECTIVES:

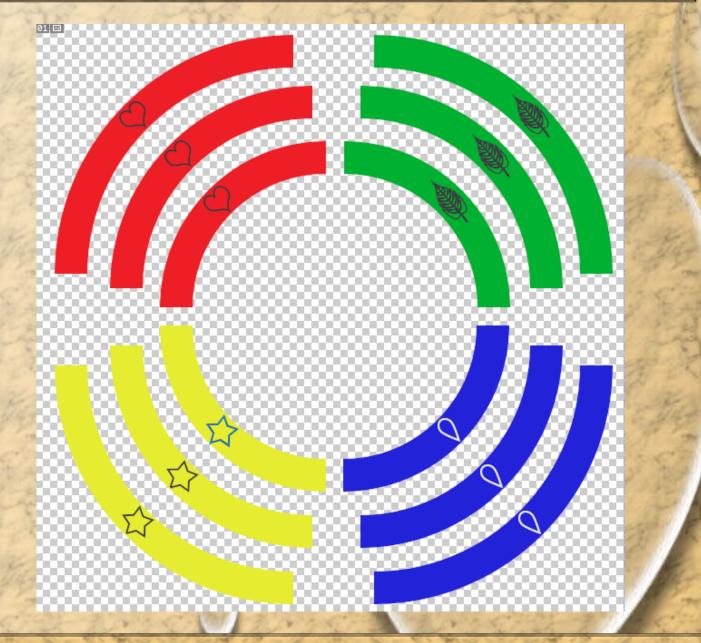

- 1) Explore a set of common gaming accessibility barriers including <u>visual</u>, <u>motor</u>, <u>hearing</u>, <u>and cognitive</u>
 <u>impairments</u> and investigate established audio-visual techniques that are used to assist players facing such accessibility barriers.
- 2) Develop separate, individual <u>unity prototypes or minisimulations</u> focused on each selected accessibility barrier.
- 3) Develop a <u>Unity game</u> that integrates all accessibility techniques into the main game loop.
- 4) Analyse and evaluate how well the integrated accessibility features satisfy established accessibility guidelines in gaming such as "game accessibility guidelines" and "includification"
- 5) Analyse and evaluate the scalability of the integrated accessibility features in terms of its <u>impact on the game's performance</u>.

Implementation Progress

Directions for Future Work

- ✓ Solution for **Motor Impairment** Accessibility Barrier
 - Replace Stimuli: Allow player to use <u>voice</u> <u>commands</u> as an alternative over <u>mouse &</u> <u>keyboard</u>
- Solution for Visual Impairment Accessibility Barrier
 - Replace Stimuli: Add <u>shapes</u> that the user can associate with certain <u>colours</u>

- Solution for **Cognitive Impairment** Accessibility Barrier
 - Enhance/Reduce Stimuli: Give user the option to increase/decrease game speed

Future Development outside of Project Scope:

- (1) Include user-swappable colour themes/palettes
- (2) Due to technological limitation (delayed system response), Unity Speech Recognition can be replaced with a more efficient Speech Recognition Software/System.
